(54) Title: DEVICE FOR TREATING NIGHTTIME BREATHING PROBLEMS

(57) Abstract: Device for treating breathing problems, comprising a shaped part fitting onto the teeth of the lower jaw, a shaped part fitting onto the teeth of the upper jaw, and adjustable connecting means between the upper and lower shaped part for forward/backward and upward/downward adjustment of the upper shaped part relative to the lower shaped part, wherein one of the shaped parts is provided at the front with a slide mechanism consisting of a slide element which is slidable laterally to a limited extent along a guide element, and the adjustable connecting means are fixedly connected to the other shaped part on one side and to the slide element on the other, thus allowing a precise forward/backward and upward/downward adjustment with a limited freedom of movement of the lower jaw in relation to the upper jaw.
